EDUCATION

University of California, Santa Cruz

Graduated March 2025

B.S. Computer Science, 3.77 GPA, Honors in the Major

Relevant Coursework: Intro to Software Engineering, Software Design Project, Web Applications, Data Structures and Algorithms, Machine Learning Basics, Computer Architecture

WORK EXPERIENCE

Qualitest, Santa Clara, CA

Apr. 2026 – Present

Graduate Engineer

- **Data Collection Moderator – Meta Platforms (On-site, Fremont)** May 2026 – Present
 - Guide participants through scripted motion capture sessions for AI/ML and AR/VR data collection
 - Troubleshoot hardware and software issues in a fast-paced environment to maintain workflow efficiency
 - Collaborate with cross-functional teams to ensure reliable data collection and operational consistency
 - Ensure accurate post-session data through detailed documentation, spreadsheets, and organized file handling
- **Data Collector – Meta Platforms (Off-site data collection)** Apr. 2026 – May 2026
 - Contributed to AI/ML and AR/VR development through ground truth data collection using Meta Aria glasses
 - Supported structured data capture workflows to ensure accurate and consistent ML datasets

PROJECTS

Notes of Matcha | GitHub | Live Demo

React, TypeScript, Vite, Tailwind CSS, Supabase, Docker

Full-Stack Engineer

Mar. 2026

- Engineered a full-stack matcha journal, implementing per-user data isolation via PostgreSQL row-level security policies
- Designed a relational schema with cascading deletes, triggers, and automated database functions
- Built responsive UI views with real-time filtering and keyboard navigation to improve usability
- Deployed to production via GitHub, configuring environment variables and schema migrations

Impact of Generative AI on the Stock Market | GitHub

Python, JavaScript, HTML, Claude API

Product Owner/Full-Stack Engineer

Jan. 2025 - Jun. 2025

- Simulated market data and trading activity to generate insights for evaluating automated strategies
- Engineered prompt frameworks that translated user-defined trading rules into executable trading logic
- Developed rule-based trading bots that simulated realistic market behavior for strategy evaluation
- Built an interactive trading interface enabling users to track and analyze market activity, trades, and bot results

Trading Card Game Tracker | GitHub

JavaScript, React, Python, HTML, CSS

Product Owner/Full-Stack Engineer

Sept. 2024 - Dec. 2024

- Led a 6-person cross-functional team using Scrum to deliver a Pokémon trading card collection management application
- Designed a card detail page that improved clarity when viewing card information and valuation data
- Engineered a profit calculator enabling users to estimate card value and grading cost tradeoffs
- Implemented dynamic card search and display features that improved usability for browsing collections

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, HTML, CSS, C, C++
- **Databases:** PostgreSQL, SQL, Redis/Valkey
- **Frameworks and Libraries:** React, Node.js, Bootstrap
- **Web and Development Tools:** Git/Github, Docker, Vercel, Firebase, Supabase, Figma, LaTeX
- **AI and LLMs:** Claude, ChatGPT/Codex, Gemini, Prompt Engineering
- **Project Management:** Jira, Agile (Scrum)

CERTIFICATIONS

- **IBM AI Product Manager Professional Certificate** – IBM & SkillUp via Coursera April 2026
- **AWS Generative AI Applications Professional Certificate** – Amazon Web Services via Coursera March 2026
- **Machine Learning in Python Environment** – Alison February 2026
